

Create a simple app that connects to mock API to display a list of menu items.

Features:

The mock API path: <https://api.myjson.com/bins/kvdzh>

Response: JSON

Menu Items list screen

- Displays a list of menu items. It contains item name and photo.
- You should cache the API response for offline use.
- Clicking on any item should open the Item details screen.

Item details screen

- The item photo should be displayed at the top of the page with the item description underneath.

General Notes:

1. We care for clean design, easy-to-read bug-free code, and simple documentation.
2. Your source code should compile without any errors.
3. You're allowed to use open source libraries.
5. Use Realm for caching is a must.
6. Use Retrofit as a network layer is a must.
7. Create repository on any git tool and commit as you can is a must. 
8. Using android architecture component is a must.
9. Unit testing is a plus.
